Rack shelf - product description

Rack cabinet shelves are most often used when we want to install devices not adapted to be mounted on 10 or 19" Rack rails. Most often these are: computers/servers, converters, recorders or analyzers. Devices can be placed on shelves, fixed with bands or screws using perforated holes. **Netrack shelves** have a stable structure and are made of thick, durable sheet metal. This guarantees durability even under heavy loads. Pull-out shelves are used when we want the devices placed on them to be pulled out for better access. This simplifies installation and administration. It is also possible to mount the shelf in reverse - it can then serve as a narrow drawer for devices or documents.
